

How Secure Is Your MSP?

With the rise of cybercrime and cyber attacks on IT providers in recent news, it is important to ensure that every MSP is practicing safe security practices by making sure the following are being covered by your current Cyber Security Plan.

Is Your MSP Doing These Things Internally?

- Two-Factor / Multi-Factor Authentication
- Password Management
- Security Risk Assessment
- Information Security Plan
- Policies and Procedures (internal & external)
- Cyber Security Insurance
- Data Access Management
- Security Awareness Training (with Phishing training)
- Data Encryption
- Next Gen Antivirus & Firewall
- Data Breach Financial Liability Amount
- E-mail Security Layers

If not it may be a good time to start...
